INSIDE DOOR STEP

A inside door step is created in places where the door is below floor level of the raised floor.

PBS accepts no liability whatsoever for any direct or indirect damages, of any nature whatsoever arising from the information on this product sheet.

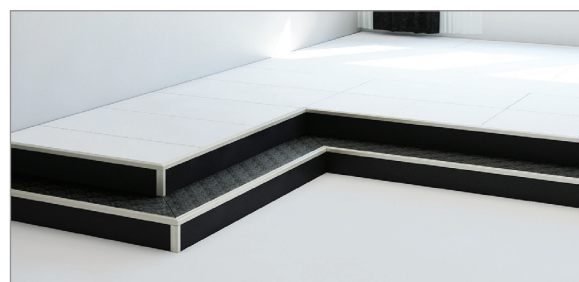

A inside door step is fitted with a vertical panel on the inside. This seals off the under floor compartment from view.

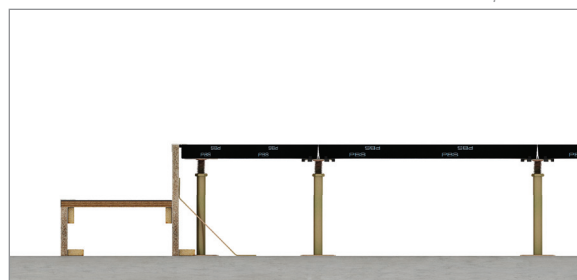

Accessories

Door Entrance

If the door is not at the same height of the raised floor a inside door step can be made. If the floor is higher than 200 mm, then one or more inside door steps are made. These are built into the floor in such a way that the step up is safe. The edge is fitted with a aluminium edge profile for protection. The tread of each step is covered with rubber with a tear-drop design for anti-slip. We manufacture the steps as part of the construction so that a correctly sized, high quality finish is assured.

Inside door steps can be made in all types and sizes. A corner step is one of the possibilities.

For heights of more than 200 mm one or more steps are made.
