VOLUME REGULATOR

A slat regulator to avoid hot spots and for accurate adjustment of the air flow.

PBS accepts no liability whatsoever for any direct or indirect damages, of any nature whatsoever arising from the information on this product sheet.

Accessories

Grid Regulator

In data centres and rooms where high(er) air speeds and large pressure differences occur under the floor there is a need to be able to adjust the air flow more accurately. PBS provides a volume regulator specially for these situations made of untreated aluminium. Using variable slats the air flow can be accurately adjusted. This regulator can be combined with the VLR, the VLA and the Air Vent.

The regulator is 60 mm high and is attached to the ventilation tile in question with special clamps.
