Product Sheet

PVC TILES, APPLIED AFTERWARDS

PBS accepts no liability whatsoever for any direct or indirect damages, of any nature whatsoever, arising from the information on this product sheet.

A flexible, hard wearing, top layer with modern designs!

Top Layers

PVC Tiles, Applied Afterwards

A raised floor can also be tiled with PVC tiles once laid. These tiles are available in different sizes and designs. The PVC tiles are manufactured thicker (approx. 5 mm thick), and are therefore stable enough to permanently cover the seams in a computer floor. This top layer is therefore suited to being laid afterwards - on site - on the raised floor. The wide range of colours and beautiful finishes make it possible to achieve a fantastic result!

PBS combines the application of tiles with the installation of a raised floor. This ensures you of an excellent result, the risk is minimal and you only need to deal with a single supplier.

Finishing Panel

PVC tiles have a different form factor to the raised floor panels. This means that the PVC tiles cover the seams of the raised floor.
